# BlackPearl Eon Browser Updates

---

This section provides instructions to update your BlackPearl Eon Browser as well as an overview of the features and changes for each released version.

| Topic                 |         |
|-----------------------|---------|
| Requirements          | page 11 |
| Updating the Software | page 12 |
| Package History       | page 12 |

## REQUIREMENTS

The BlackPearl Eon Browser has the following requirements:

- The host computer where the BlackPearl Eon Browser resides must use one of the 64-bit operating systems listed below:

| Operating System | Version   |
|------------------|---|
| <b>Windows</b>   | <ul style="list-style-type: none"><li>▪ Windows 10</li><li>▪ Windows 8</li><li>▪ Windows 7 SP1</li><li>▪ Windows Server 2008 R2 SP1</li><li>▪ Windows Server 2012 and 2012 R2</li></ul> |
| <b>Mac OS X</b>  | <ul style="list-style-type: none"><li>▪ Mac OS X 10.9, or later</li></ul>   |
| <b>Linux</b>     | <ul style="list-style-type: none"><li>▪ Ubuntu Linux 16.x</li><li>▪ Fedora 25</li></ul>   |

- You can create a build of the Eon Browser for your Linux distribution and version by following the instructions found at:  
[https://github.com/SpectraLogic/ds3\\_java\\_browser/blob/master/BUILD.md](https://github.com/SpectraLogic/ds3_java_browser/blob/master/BUILD.md)
- The host operating system must have Java Runtime Environment version 8u-1.8, or later, installed.
- The BlackPearl system must be running BlackPearl 3.2.2, or later.
- Files stored as objects on a BlackPearl system must follow the Amazon S3 naming guidelines. See <http://docs.aws.amazon.com/AmazonS3/latest/dev/UsingMetadata.html> for more information.

- Files stored on the BlackPearl system cannot use the semi-colon character (;).
- Files stored on tape media must follow LTFS naming restrictions:
  - The colon character (:) is not allowed in LTFS file names and therefore not allowed in BlackPearl object names. The slash character (/) is also technically not allowed in LTFS file names; however, the BlackPearl software can accommodate a slash in the object name and translates it as a directory in the LTFS file system (e.g. directory1/directory2/video1.mov).
  - Directory names have a limit of 255 characters.
  - File names have a variable character limit. If you are using English ASCII characters, the limit is 1024 characters. If you are using a graphical language, such as Japanese, the limit is 512 characters.
  - Spectra Logic does not recommend the following characters in LTFS file names or BlackPearl object names for reasons of cross-platform compatibility: control characters such as carriage return (CR) and line feed (LF), double quotation mark (“), asterisk (\*), question mark (?), less than sign (<), greater than sign (>), backslash (\), forward slash (/) vertical line (|).

| <b>Archive file properties</b> | When Archive and Restore File Properties is enabled, the Eon Browser copies these file properties to the BlackPearl gateway along with the file itself. When you restore the file from the gateway, the file properties are also restored at the same time. This allows you to maintain the original file metadata information. See the <i>BlackPearl Eon Browser User Guide</i> for more information. |
